

G54MDP GROUP PROJECT NOTES

Deadline

For those of you who weren't in the lecture the deadline for the group project is **Friday 25th May** at 23:59. This is as late as I can make while still having time to mark it and your exam before the deadline.

Deliverables

There are two deliverables for the group project: the source code for your App, and an individual report on your contribution to the App. There will be separate submission entries for each part.

The source code for each group's App should be submitted as a **.zip** or **.tar.gz** via the **cw submit** system (id: **492**) — only one copy needs to be submitted per group. If multiple submissions are made then I will choose one at random and mark it, therefore it is probably a good idea to ensure that someone is responsible for submitting it and that they have the latest version!

Your individual report should also be submitted via **cw submit** (id: **493**), this time as a PDF file. Your report should outline what your contribution has been to the project (i.e. which parts of the program you have written) as well as details of how you worked as a group, and reflections on your contribution to the project.

Marking

The marks for this exercise will be derived as follows:

60% From the app itself. The mark will be based on how well the app answers the following questions: Does the app work? Does it answer the problem it set out? How well implemented is it? How well does it take into account it is targeted for 'mobile' use.

40% Based on the individual's contribution to the project. This will be derived from their report, and also the reports written by the other team members — so don't think you'll be able to spin the fact that you haven't contributed anything toward the project.
